

DATA SHEET

InSite by AlertSite

Gain a datacenter perspective on Web performance and availability.

Compare internal measurements to readings from external locations.

Use flexible viewpoint capability for faster diagnosis.

Monitor internal network applications.

InSite by AlertSite® provides an AlertSite® monitoring station “in a box,” enabling a critical additional perspective on Web application performance and availability. InSite can be deployed at the location you choose, whether that is your own datacenter or a client’s offices or some other strategic point of presence. InSite includes AlertSite’s Web Performance Monitor, Business Transaction Monitor with DéjàClick™, E-mail Monitor, and Server Availability Monitor, and supports up to 100 monitors simultaneously. From your own datacenter, InSite can also measure the performance of internal network applications that are not accessible via the public Internet like back office applications, CRM and other Web based applications.

InSite can help you quickly understand whether Web site slowdowns or performance glitches are due to internal systems networking problems, internal network bottlenecks, or issues stemming from further upstream on the Internet. When deployed at a client’s place of business, InSite provides objective performance and availability data that can be measured and used to manage SLAs against perceptions. InSite adds a customized viewpoint and a critical dimension to your perspective on Web performance and availability.

Key Features

- Provides a customized additional viewpoint of Web performance and availability
- Includes all the features of AlertSite's Web Performance Monitor, Business Transaction Monitor with DéjàClick™, E-mail Monitor, and Server Availability Monitor
- Supports up to 100 monitors at once
- Enables monitoring of internal network applications
- Facilitates quicker diagnosis of problems through multi-dimensional perspective

The Value of Perspective

Selecting your point of view, you acquire specific insight with InSite by AlertSite®.

With InSite installed at your datacenter, you can compare metrics measured from inside and outside your network to determine the location of slowdowns and performance problems. By comparing measurements taken from behind your firewall with those generated from the outside, you gain a 360-degree perspective, enabling a quicker diagnosis of problems and more precise insight into your ongoing Web performance and availability.

InSite also enables you to measure the performance of your internal network applications, such as accounting and inventory programs, which are not visible to the outside world. Problems with internal applications can trigger significant bottlenecks in your business' operations. InSite provides you with the specialized monitoring capacity necessary to ensure that internal network applications perform.

Also, by deploying InSite at the physical location of a client, you can ascertain precisely how well your Web applications and pages are performing from the perspective of that client. Should a difference in perceptions arise regarding your Web performance and availability from that location, InSite provides objective data by which to manage perceptions and confirm performance levels.

Unparalleled Service and Support

AlertSite is a leading provider of Web performance measurement, systems monitoring and security vulnerability scanning products that ensure a customer's critical Web-based services are always available and running at peak performance. AlertSite services benefit all types and sizes of businesses and organizations.

Founded in 1998, AlertSite is based in South Florida and maintains over 40 global monitoring stations in highly qualified data centers on every continent but Antarctica. Our global network monitors the availability and performance of your Web site, Web-based applications and transactions wherever they are operating across the globe. When trouble occurs, AlertSite helps you isolate the location of the problem.

AlertSite performance advisors provide the industry's most responsive customer service, making sure that your systems and infrastructure are operating optimally and securely. These highly trained technical experts are always available live from 8:00 a.m. to 6:00 p.m. ET, Monday through Friday. We also offer on-call support through 9:30 p.m. ET during the week.
