Measure the mobile user experience

Record and playback mobile transactions

Optimize mobile sites and applications

View sites as they display on mobile devices

Monitor over wireless carriers

Measure mobile sites from global monitoring network

Monitor your mobile site to grow your business

Sixty percent of adults in the U.S. now browse the web with a mobile device—and the number is rising fast. This means you have to provide a highly functional and reliable mobile web experience for your users. Otherwise you're going to lose business.

To compete, your website must be as reliable and responsive on a smartphone or tablet device as it is on a computer. With consumer mobile usage rapidly growing, mobile commerce continues to explode. *eMarketer* predicts mobile ad spending will grow to a whopping \$115 billion by 2013.

Do you know exactly how the mobile user views your site?

Seeing how your mobile website displays on different mobile devices is important. But you need to know more. You have to know how your site performs.

The DéjàClick™ Mobile Monitoring Solution measures mobile performance, capturing response times and availability. That's the advantage of DéjàClick with the Mobile Monitoring Solution. It not only allows you to see what your site looks like, it enables you to monitor and record your scripts and then play them back on our global monitoring network, including actual mobile networks.

DéjàClick Mobile Transaction Monitoring

DéjàClick does it all

- See how your site looks and functions on the most popular mobile devices. Viewing is re-sized instantly to replicate the device's screen size.
- Add and configure additional devices for immediate use.
- Test and monitor frequently to ensure you can resolve issues before end-users are affected.
- Display specs for the device in the same interface, including screen size, Flash and html mobile support.
- Record and play back user clicks to replicate the user's mobile experience.
- Upload your recorded script to AlertSite and monitor it from our global monitoring network which includes over-the-air mobile networks.
- Get alerts and notifications when your mobile site has availability or performance issues.

24/7 global monitoring

AlertSite® maintains global monitoring stations on six continents. Our network monitors the availability and performance of your web and mobile sites; web-based applications; and transactions.

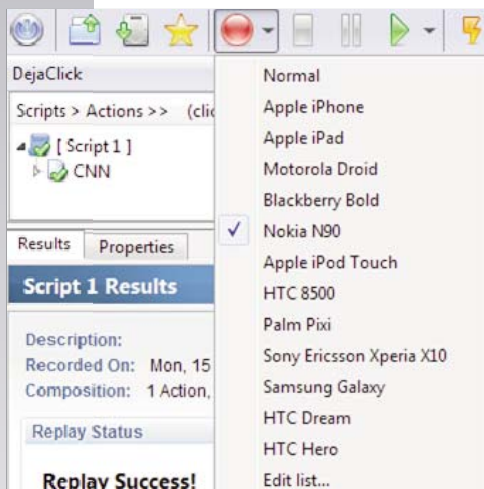

We expand worldwide coverage by continually adding network monitoring locations. To view the network, go to www.AlertSite.com.

Leader in web performance management

AlertSite is a global leader in web and mobile performance management solutions that continuously improve the web user experience. The company's flagship product, DéjàClick, is the only web performance monitor that measures a user's end-to-end website and mobile experience inside the browser—enabling companies and organizations to speed up and optimize web and mobile solutions. Over 2,300 small to enterprise-level companies rely on AlertSite's comprehensive suite of services to increase website and mobile ROI. AlertSite is known for longstanding customer loyalty, because of our focus on delivering results and providing unparalleled customer service.

Talk with proven performance advisors
